ALUTEL MOBILE

Is part of Alutel Mobility Suite 6.0 and has been designed for mobile access control and employee identity verification in remote areas.

It sends your GPS Location to the Central Server to find each one of the devices in real-time, as well as providing access to its historical tracking information.
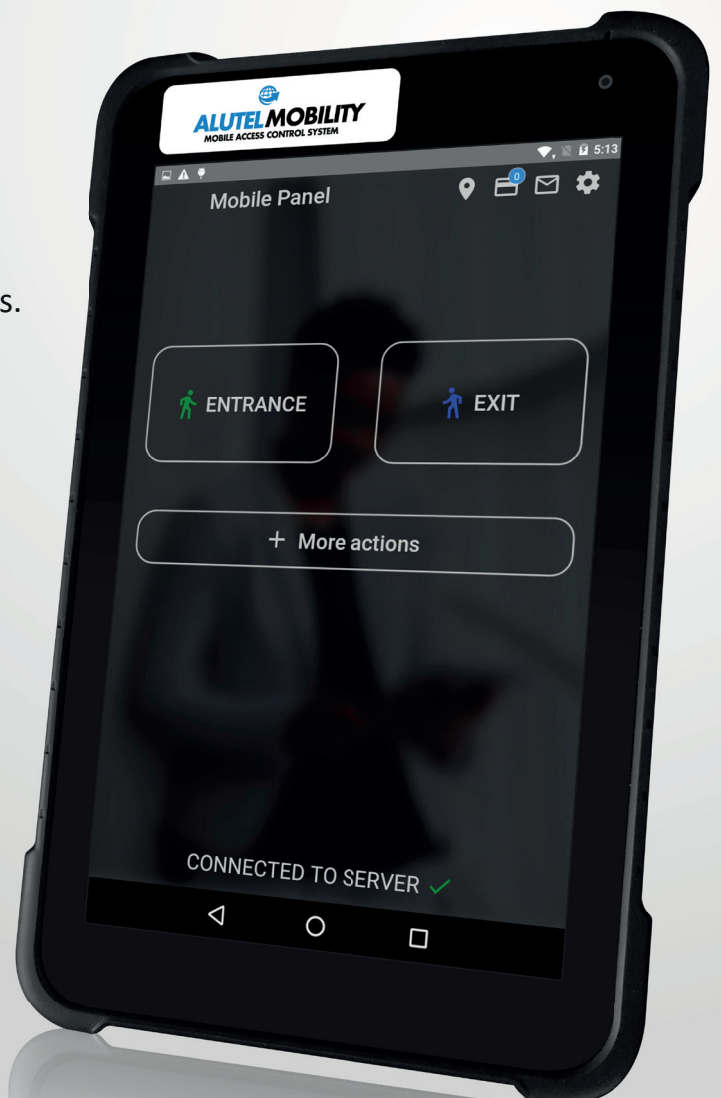

It utilizes our RAGTAB, a robust and rugged tablet, as an Access Control Controller. It verifies your access activity remotely via your RFID Badge or QR Code.

Alutel Mobile
is capable of:

API and Third-Party Integrations

ALUTEL MOBILITY
MOBILE ACCESS CONTROL SYSTEM

Mobile Panel

ENTRANCE   EXIT

+ More actions

CONNECTED TO SERVER ✓

KEY FEATURES:

Geopositioning
Know the exact location of each event generated (GPS).

Historical Tracking
Perform device and/or vehicle history tracking.

RFID Reader
OEM HID Multi-technology Reader Module incorporated capable of reading the majority of RFID Technologies in the market.

Seat-assignment Feature
Seat-assignment on Company Fleet Services. Allows for employee traceability to mitigate COVID-related events, for instance.

Generation of Access Control Events
Generates Access Control events in remote places without any infrastructure where traditional Access Control cannot reach.

Online and Offline Functionality
Functionality via WiFi and LTE. The device keeps a copy of the database internally to operate offline with backup of events and later synchronizes with the server when it is back online.

Live Tracking
Know the positioning of the device and/or vehicle in real-time.

Virtual Gates
Event generation with pre-configured virtual gates on a map.

Alarm and Notification Feature
Send and receive alarms and notifications from the different devices.

Reports
Event generation and audit right from the device.
