

Mustering is the solution for emergency situations that require evacuation, helping to account for people that are on-site, differentiating if they are safe or at risk and/or danger.

Our Mustering application, part of **Alutel Mobility Suite 6.0**, is complemented by a Robust Tablet to be able to identify personnel at evacuation or mustering areas and know their status in real-time.

Helps ensure the safety of all personnel in a physical location during an emergency, knowing where they are at the time of the emergency.

# It is compatible with:

API and Third Party Integrations

### **MAIN FEATURES:**

Secure your staff in case de emergencies

Integrates with Access Control Systems

Each individua is Identified via their **RFID Access Card** and reported at the moment of arrival

Get information in a timely manner about the last known location of missing people

Use of a mobile Tablet to carry out personnel recognition in any safe location

#### **MUSTERING WORKFLOW:**

In an emergency, Mustering shows the location of personnel in real time, where they were last seen and if they are safe or in danger.

#### **NORMAL CONDITIONS**

Employees at work under normal working conditions

#### **SECURE**

- · A list of the last remaining unsafe personnel locations is immediately available to rescue
- Lists of safe and unsafe personnel are updated in real-time via multiple devices and safe areas
- · Puede ser usado en cualquier dispositivo (iOS, Android)

# **ALARM**

- · An alarm is triggered to indicate an evacuation is in progress
- · An initial count is generated with the number of people on-site
- · A Countdown begins

## **EVACUATION**

- · Personnel that arrive at a Mustering Area or Evacuation point, identify themselves with their access control credential easily, quickly, and without errors on a mobile device (Robust Tablet)
- · Each event is synchronized with Access **Control Platforms**
- · Updated view of the evacuation in progress
